Display This comparison does not involve screens or displays, so there is no meaningful winner here. If you were expecting a tech-style comparison, the practical equivalent is the control interface and usability. The EGO LB5300 keeps things simple with a 3-speed layout and turbo mode, while the Bosch adds variable speed and a blower/vacuum switching setup. Winner: Bosch, because it offers more modes and more versatility for typical garden cleanup.

Performance The EGO LB5300 wins decisively on raw blowing performance. Its 530 CFM airflow and 56V platform put it in the premium cordless class, and that matters when you're shifting wet autumn leaves, clearing gravel drives, or dealing with larger lawns and borders. In UK conditions, especially after a windy October or a damp November, cordless blowers can struggle with heavier debris, but the EGO is one of the stronger options and is much better suited to medium-to-large gardens than a budget handheld. The Bosch UniversalGardenTidy 3000 is rated at 3000 W, which gives it respectable mains-powered output, but in practice it is more of a general-purpose garden tidy tool than a high-end blower. It will handle dry leaves well and is useful for tidying patios and smaller lawns, but it is not as forceful or as fast at shifting large volumes of debris. Winner: EGO, for sheer blowing power and speed.

Build quality and design Both brands have strong reputations, but they are designed for different jobs. The EGO LB5300 is a battery blower only, so the design is focused on comfort, balance, and airflow delivery. At this level, EGO tools are usually well-built, with a more premium feel than budget mains tools. The big advantage is freedom from a cable, which is a major quality-of-life upgrade if you have a detached garage, a long garden, or lots of obstacles. The Bosch is lighter on paper at 4.7 kg and includes both blowing and vacuuming/ shredding functions plus a 50 L collection bag. That makes it more of a multi-tool for tidy-up sessions, but it also means more parts, more switching, and more faff when moving between tasks. Winner: EGO for premium build and cleaner, simpler design; Bosch only wins if you value the integrated vac/shred setup.

Battery life This is the biggest practical difference, and Bosch does not compete here in the same way because it is mains powered. The EGO runs on a 56V battery, but battery and charger are not included, so you must already own compatible EGO batteries or buy into the platform. Runtime will depend on battery size and speed setting, but the upside is unlimited mobility and no extension cable. The Bosch has no battery life concern at all, because plugged-in power means consistent output for as long as you need it. For people with a nearby outdoor socket and a small-to-medium garden, that is a genuine advantage. Winner: tie, because EGO wins on cordless convenience while Bosch wins on uninterrupted runtime.

Price and value for money Bosch is the clear winner on price. At £72.99, it is £161.32 cheaper than the EGO at £234.31, and that gap is enormous. For most UK homeowners, especially those with modest lawns, patios, or leaf fall from a couple of trees, the Bosch offers very strong value because it combines blowing, vacuuming, and shredding in one affordable machine. The EGO only makes financial sense if you specifically need cordless performance, already own EGO batteries, or have a larger garden where cable management is a pain. Because the EGO is sold tool-only, the real cost may be much higher once you factor in battery and charger. Winner: Bosch, by a wide margin.

Game library/features Again, there is no game library here, but the equivalent is feature set. Bosch wins on features because it is a blower, vacuum, and shredder with a 50 L collection bag and variable speed control. That makes it better for users who want to gather leaves rather than simply move them around. The EGO LB5300 is more focused: it is a dedicated blower with 3-speed turbo control. That narrower feature set is not a weakness if your main goal is fast clearing, but it is less versatile. Winner: Bosch.

Overall user experience For day-to-day use, the EGO feels like the more premium and less frustrating tool if you have a bigger property or hate cables. It is the better choice for quickly clearing driveways, lawns, paths, and borders, especially when leaves are damp and stubborn. The Bosch is easier to justify for most buyers because it is cheaper, includes vacuuming and shredding, and is good enough for regular garden maintenance. If your garden is small to medium-sized and you want one affordable machine to blow, vacuum, and mulch leaves into a bag, Bosch is the smarter buy. If you want the strongest cordless experience and are prepared to pay for the EGO battery ecosystem, the LB5300 is the superior blower. Overall summary: EGO is the better performance tool; Bosch is the better value and the more versatile all-rounder.

Winner: b

The Bosch UniversalGardenTidy 3000 is the better buy for most people because it is dramatically cheaper, more versatile, and still highly rated. At £72.99, it undercuts the EGO by £161.32 while adding vacuuming, shredding, and a 50 L collection bag. Unless you specifically need cordless power and already own EGO batteries, the Bosch delivers the better overall package for typical UK gardens.

Buy Product A If...

Buy the EGO LB5300 if you already own EGO 56V batteries and want to stay on that platform. It is the better choice for larger gardens, long drives, and windy or wet autumn leaf clear-ups where cordless freedom and stronger blowing performance matter more than vacuuming. It also suits users who want a more premium, simpler tool with less cable hassle.

Buy Product B If...

Buy the Bosch UniversalGardenTidy 3000 if you want the best value and need a leaf blower that also vacuums and shreds. It is ideal for small to medium UK gardens, patios, and regular seasonal tidy-ups where a mains cable is not a big problem. If you want to collect leaves rather than just move them, Bosch is the practical choice.
